

Fig. 1

Fig. 2

Fig. 3

Commands which read the pointer register			
store pointer	(store pointer)	sp	py[index] := pz
copy pointer	(copy pointer)	cpp	px := pz
compare pointers	(compare pointers)	cmp	dx := py, pz

Commands which write the pointer register			
allocate object	(allocate object)	alc	px := dy, dz
load pointer	(load pointer)	lp	px := py[index]
copy pointer	(copy pointer)	cpp	px := pz
create const. pointer	(create const. pointer)	ccp	px := dy

Commands which dereference the pointer register			
load data	(load data)	ld	dx := py[index]
load pointer	(load pointer)	lp	px := py[index]
store data	(store data)	sd	py[index] := dz
store pointer	(store pointer)	sp	py[index] := pz
read π attribute	(read π -attribute)	pattr	dx := py
read δ attribute	(read δ -attribute)	dattr	dx := py

dx, dy, dz data register
px, py, pz pointer register
index expression for type of
 indexing
